SKILLS

- **Languages:** C++, Java, Python, JavaScript, Kotlin
- **Frontend:** HTML, CSS, Bootstrap, React
- **Backend & Frameworks:** Flask, OpenCV, Selenium, Node.js, Django
- **Databases:** MySQL, SQL Server
- **Networking:** Cisco Packet Tracer, TCP/IP, OSI Model, Subnetting, VLANs, DNS, DHCP, Routing & Switching
- **Monitoring & Log Management:** Grafana, Elastic Stack (ELK), Logstash, RabbitMQ
- **Security Tools:** Wireshark, Nmap, Metasploit, Hydra, John the Ripper, Hashcat
- **Tools/Platforms:** PowerShell, Git/GitHub, Docker, REST API Integration
- **Soft Skills:** Problem-Solving, Team Collaboration, Project Management, Adaptability

EXPERIENCE

Network Operations Center (NOC) Engineer

May 2026 – Present

Future Communications Company | Indore, Madhya Pradesh, India (On-site)

- Monitor network infrastructure and service health in real time using Network Monitoring Tools and Grafana dashboards to identify and triage performance anomalies.
- Manage log ingestion, parsing, and analysis pipelines using the Elastic Stack (ELK) and Logstash to support faster incident detection and root-cause investigation.
- Work with RabbitMQ-based messaging queues to monitor and troubleshoot data flow issues across distributed services.
- Lead incident management workflows — logging, prioritizing, escalating, and resolving network/service incidents to minimize downtime and meet SLA targets.
- Perform first-line troubleshooting on network and system issues, coordinating with cross-functional teams to drive tickets to resolution.

Tech: Network Monitoring Tools, Grafana, Elastic Stack (ELK), Logstash, RabbitMQ, Incident Management, Troubleshooting

PROJECTS

EVTXray – Windows Log Forensic Threat-Hunting Tool

Mar' 26 – Present

Developed EVTXray, a Python/Flask forensic investigation tool that ingests Windows Security EVTX log files, parses thousands of events, maps findings to MITRE ATT&CK techniques, and generates professional HTML incident reports — targeting SOC L1 triage workflows.

- Detects high-value Event IDs: 4625 (failed logons), 4720 (account creation), 4672 (privilege escalation), 4688 (process creation)
- Maps findings to MITRE ATT&CK techniques — T1110 (Brute Force), T1078 (Valid Accounts), T1059 (Command Execution)
- Classifies threats by severity: Critical / High / Medium / Low with timeline reconstruction across multi-event attack chains
- Built as a modular Flask web app with drag-and-drop EVTX upload and downloadable HTML incident reports
- Deployable in air-gapped forensic environments

Tech: Python, Flask, *python-evtx*, Jinja2, HTML/CSS | [Deployed Link](#)

SafeMe – Android App Security Risk Analyzer

Feb' 26

Developed SafeMe, a mobile security analysis tool that performs static and dynamic analysis on installed Android applications to detect security misconfigurations and runtime risk indicators.

- Static Analyzer scores APKs across 7 risk vectors: debuggable (+15pts), cleartext traffic (+10pts), dangerous permissions (+20pts), legacy SDK<28 (+8pts), exported components (+7pts), allowBackup (+5pts), unknown install source (+5pts)
- Dynamic Analyzer tracks real-time signals: network data usage, foreground session time, running services, and granted permissions via UsageStatsManager
- Custom RiskScorer classifies apps as CRITICAL ≥ 75 / HIGH ≥ 50 / MEDIUM ≥ 25 / LOW < 25 , score capped at 100
- Integrated QUERY_ALL_PACKAGES for Android 11+ app visibility with permission fallback chains for broad device compatibility

Tech: Kotlin, Jetpack Compose, Android SDK, MVVM Architecture

IAAttend – Attendance Monitoring System

Jun' 25

Developed iAttend, a real-time Face Recognition Based Attendance Monitoring System that automated attendance tracking using Python, OpenCV, and machine learning algorithms. By implementing Haar Cascade classifiers for detection and the LBPH (Local Binary Patterns Histograms) algorithm for recognition, the system achieved approximately 90% accuracy in diverse lighting conditions while reducing attendance recording time by 83% compared to manual methods.

- Tkinter-based GUI with password-protected access to ensure data security and ease of use
- Automated CSV-based logging that cut administrative workload by 80% and eliminated proxy attendance cases entirely
- Demonstrated scalability of AI-driven solutions for educational institutions

Tech: Python, OpenCV

CryptoHound – Fraud Detection System

May' 25

Developed CryptoHound, an advanced blockchain analytics platform to monitor, trace, and investigate cryptocurrency transactions across multiple networks, enhancing fraud detection by 45%. The system processes real-time transaction data, identifies suspicious activity patterns, and ensures compliance with financial regulations, reducing manual analysis time by 60%.

- Transaction Monitoring: Engineered a robust tracking mechanism using blockchain APIs (BitcoinAPI) to trace cross-chain crypto flows, improving transparency by 50%.
- Fraud Detection: Implemented machine learning-based anomaly detection to flag high-risk transactions, increasing threat identification accuracy by 40%.
- Regulatory Compliance: Automated AML/KYC checks by integrating rule-based alerts, ensuring 90% faster reporting for audit purposes.

Tech: Java, Java Swing (GUI), JDBC, MySQL, Blockchain APIs

CERTIFICATES

- Foundations of Cybersecurity - Google
- GenAI for Cybersecurity: Threat Hunting, SecOps & Patching - Udemy

EDUCATION

Lovely Professional University

Master of Computer Applications; CGPA: 7.9

Punjab, India

Aug' 24 – Present

SJHS Gujarati Innovative College

Bachelor of Computer Applications; Percentage: 71%

Indore, Madhya Pradesh

Apr' 20 – Mar' 23

St. Joseph's School

Intermediate; Percentage: 61%

Indore, Madhya Pradesh

Apr' 19 – Mar' 20
